Free Energy Magnet - The Alternative Energy

Let's face it, our modern systems of energy are pretty terrible at least here in the States. Our power is almost entirely generated by filthy coal and other fossil fuels. By all estimates, we could only continue 100 years as is, at most! And that doesn't even take sociopolitical situations into account. Think about it. Within my lifetime, those resources could become scarce enough to create some pretty dangerous situations. When resources are low, it leads to war and violence. So clearly, we need to find other resources and phase out these old pollutants entirely. The good news is, you can build free energy systems to generate your own power. So by free, of course you have to buy parts to build it, and usually a guide to make it, but we're talking here about non-utility provided electricity that you generate at home. Of course, you can often buy these devices pre-built. To give you an idea, let's look at some of the options:

1. Solar Panels: This is probably the best "renewable energy" device around. Photovoltaic Panels (PVP) as they're also known, use energy from the sun and convert it into electricity. I know, you know what a solar panel it. I'm just saying. The thing with solar panels is that they don't put out a lot of power! they're only like 13% efficient for all the energy that hits them. Lots of it gets reflected back, some of the light hits at the wrong angle, whatever. Definitely cool, but overall the tech has a long way to go. And from what I can tell, those [DIY solar panel guides](#) make you find old, broken down pvp bits from those solar walkway lights. I don't know, that sounds kind of tricky to me.

2. Wind Turbines: Wind turbines are cool. It just uses wind to turn a generator and BOOM, electricity! The problem here is that wind isn't always blowing, so something like grid tie-in isn't a good option if you want to maximize the use of it, so you'd have to have a whole battery shed thing. The plus is, there is still wind at night, when there's no sun for your solar panels.

3. Free Energy Magnetic Generator: Okay, this is where the free energy magnet title comes into play. For now, I won't talk about how these things are supposed to work, but the thing is, this is a highly suppressed technology that utilizes permanent magnets to generate MORE than enough electricity to keep itself turning. That means that once you "jump start" it with some power, it can keep itself going and give you free energy forever. Yes, that's right, free energy. This is also called zero point energy, or an over-unity motor. I love those words, they sound sweet. This is about the sweetest thing you could have to power or supplement the [power from your home](#).
